

Jacob W. Archambault is a philosopher, logician, and computer programmer currently working as a full stack C# .NET developer in Louisville, KY. His main academic research is in the history and philosophy of logic, focusing on the notion of formal consequence and its development in medieval philosophy. Besides this, Jacob has published across a wide variety of areas – including the philosophy of computing, the history of physics, religion, and metaphysics – for both specialized and non-specialized audiences. He is the founder of the Philosophy Outside the Text project, which provides rigorous, enduring philosophy writing to a broad audience, unencumbered by the jargon and references inhibiting the reach of most academic philosophy writing today.

Jacob holds a PhD in philosophy and Doctoral Certificate in Medieval Studies from Fordham University. He has taught courses on human nature, ethics, Latin, classics and metaphysics across secondary and post-secondary levels of education, and has presented his work to professional audiences across three continents. You can find Jacob's academic papers at his Academia.edu page, his popular writing at Medium.com, and his coding projects at GitHub and his personal website at jacobarchambault.com.
